**Features**

● **Smaller in Size and Lighter in Mass**

As indicated in the dimensional comparison presented below, the AR16 is smaller than the A16 (32 design). Also, the mass of AR16 is substantially lighter than the A16.

● **Low Noise**

The noise level of AR16 has been reduced by 1-2 dB (A) at full flow and full cut-off compared with that of the excellent A16 quiet pump.

**[Comparison of "AR16" with "A16"]**

**DIMENSIONS IN MILLIMETRES (INCHES)**

Model	Approx. Mass (Flange Mtg.)	Ratio of Mass (AR16/A16)
AR16	9.8 kg (21.6 lbs.)	60 %
A16	16.5 kg (36.4 lbs.)	

# Instructions

## 1. Hydraulic Fluids

Use petroleum base oils such as anti-wear type hydraulic oils or R & O (Rust and Oxidation inhibitor) type hydraulic oils equivalent to ISO VG-32 or 46. The recommended viscosity range is from 20 to 400 mm<sup>2</sup>/s (98 to 1800 SSU) and temperature range is from 0 to 60°C (32 to 140°F), both of which have to be satisfied for the use of the above hydraulic oils.

## 2. Control of Contamination

Due caution must be paid to maintaining control over contamination of the operating oil which can otherwise lead to breakdowns and shorten the life of the unit. Please maintain the degree of contamination within NAS Grade 10.

The suction port must be equipped with at least a 100 μm (150 mesh) reservoir type filter and the return line must have a line filter of under 10 μm.

## 3. Mounting

When installing the pump the filling port should be positioned upwards.

## 4. Alignment of Shaft

Employ a flexible coupling whenever possible, and avoid any stress from bending or thrust.

Maximum permissible misalignment is less than 0.1 mm (.004 inches) TIR and maximum permissible misangular is less than 0.2°.

## 5. Suction Pressure

Permissible suction pressure at inlet port of the pump is between -16 and +50 kPa (5 in.Hg Vacuum and 7 PSIG).

For piping to the suction port, use the pipes of the same diameter as that of the specified pipe flange to be used. Make sure that the height of the pump suction port is within one metre (3.3 ft) from the oil level in the reservoir.

## 6. Hints on Piping

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise.

Whenever there is fear of excessive load, please use rubber hoses.

## 7. Suction Piping

In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.

## 8. Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal pressure of less than 0.1 MPa (14.5 PSI) and surge pressure of less than 0.5 MPa (72.5 PSI).

Length of piping should be less than 1 m (3.3 ft.), and the pipe end should be submerged in oil.

In case AR16 and AR22 pump, a screw-in torque of fitting is 40 to 50 Nm (354 to 443 IN.lbs.). Do not apply bending and thrust torque to the fitting.

**[Recommended Drain Piping Size]**

Model	Fitting Size	Inside Dia. of Pipe
AR16, AR22	3/8 [Inside Dia. 8.5 mm (.33 in.) or more]	10 mm (.39 in.)

## 9. Bleeding Air

It may be necessary to bleed air from pump case and outlet line to remove causes of vibration. An air bleed valve (Model No. ST1004-\*-10\*, Catalogue No.: Pub. EC-3001) is recommended for this purpose.

**10. Starting**

Before first starting, fill pump case with clean operating oil via the fill port.

In order to avoid air blockage when first starting, adjust the control valves so that the discharged oil from the pump is returned direct to the tank or the actuator moves in a free load.

**[Volume of Pre-fill Oil Required]**

Model	Volume cm <sup>3</sup> (in. <sup>3</sup> )
AR16 AR22	430 (26.2)

**11. Setting Discharge Pressure and Delivery**

At the time of shipment, the unit has been preset to maximum delivery and minimum discharge pressure

Adjust the preset delivery and pressure to meet your system requirements.

● **Adjustment of Discharge Pressure**

Turning the adjustment screw clockwise, increases pressure.

## Features

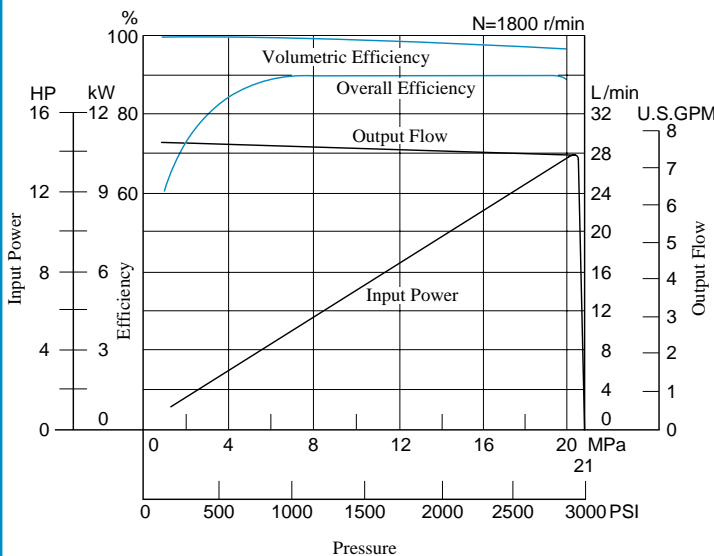

### High efficiency

Under the conditions of pressure 16 MPa (2320 PSI) and speed 1800 r/min, the volumetric efficiency is over 98% and the overall efficiency is over 90%.

### Low noise level

In the "A16" pump, the noise level is as low as 57.3 dB(A) [at the full cut-off pressure 21 MPa (3050 PSI) with speed 1500 r/min one metre (3.3 ft.) horizontally away from pump head cover.]

"A16" type performance characteristics

"A16" type noise level characteristics

### Accomplishment of energy-saving

Because the overall efficiency is high and the cut-off characteristics is sharp, thus the input power may be saved.

### Low heat generation

Because of small power loss, it is possible to reduce the rise in oil temperature. Accordingly, capacity of a reservoir can be reduced.

# Instructions

## 1. Hydraulic Fluids

Use petroleum based oils such as anti-wear type hydraulic oils or R & O (Rust and Oxidation inhibitor) type hydraulic oils equivalent to ISO VG-32 or 46. The recommended viscosity range is from 20 to 400 mm<sup>2</sup>/s (98 to 1800 SSU) and temperature range is from 0 to 60° (32 to 140°F), both of which have to be satisfied for the use of the above hydraulic oils.

## 2. Control of Contamination

Due caution must be paid to maintaining control over contamination of the operating oil which can otherwise lead to breakdowns and shorten the life of the unit. Please maintain the degree of contamination within NAS Grade 10.

The suction port must be equipped with at least a 100 μm (150 mesh) reservoir type filter and the return line must have a line type filter of under 10 μm.

## 3. Mounting

When installing the pump the filling port should be positioned upwards.

## 4. Alignment of Shaft

Employ a flexible coupling whenever possible, and avoid any stress from bending or thrust.

Maximum permissible misalignment is less than 0.1 mm (.004 inches) TIR and maximum permissible misangular is less than 0.2°.

## 5. Suction Pressure

Permissible suction pressure at inlet port of the pump is between -16.7 and +50 kPa (5 in.Hg Vacuum and 7 PSIG).

For piping to the suction port, use the pipes of the same diameter as that of the specified pipe flange to be used. Make sure that the height of the pump suction port is within one metre (3.3 ft) from the oil level in the reservoir.

## 6. Hints on Piping

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise.

Whenever there is fear of excessive load, please use rubber hoses.

## 7. Suction Piping

In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.

## 8. Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal pressure of less than 0.1 MPa (14.5 PSI) and surge pressure of less than 0.5 MPa (72.5 PSI).

Length of piping should be less than 1 m (3.3 ft.), and the pipe end should be submerged in oil.

### [Recommended Drain Piping Size]

#### (Single Pump & Variable/Fixed Double Pump)

Model	Fitting Size	Inside Dia. of Pipe
A10, A16, A16R1 A22, A22R1	3/8 [Inside Dia. 8.5 mm (.33 in.) or more]	10 mm (.39 in.)

A56, A56R1 A70, A70R* A90, A90R* A145, A145R*	3/4 [Inside Dia. 16 mm (.63 in.) or more]	19 mm (.75 in.)

#### (Double Pump)

Refer to the suitable single pump as shown below.

- Fix drain pipe for each side of the pump.

## 9. Bleeding Air

It may be necessary to bleed air from pump case and outlet line to remove causes of vibration. An air bleed valve (Model No. ST1004-\* -10\*, Catalogue No.: Pub. EC-3001) is recommended for this purpose.

## 10. Starting

Before first starting, fill pump case with clean operating oil via the fill port.

In order to avoid air blockage when first starting, adjust the control valves so that the discharged oil from the pump is returned direct to the tank or the actuator moves in a free load.

■ Control Type

● Single Pumps

Control Type	Graphic Symbols	Performance Characteristics	Explanation	Page
"01" Pressure Compensator Type			When the system pressure increases and comes close to the preset cut-off pressure, the pump flow decreases automatically while maintaining the set pressure as it is.	6
"02" Solenoid-two Pressure Control Type			This type of control is ideal for an application where the output power of the actuator has to be controlled in two different load pressures while keeping the actuator speed nearly constant.	28
"03" Pressure Compensator with Unloading Type			It is suitable for a situation where a long unloading time is required and heat generation and noise have to be kept at their lowest levels. <ul style="list-style-type: none"><li>• The pump can be used in combination with the multistage pressure control valve.</li></ul>	36
"04" Proportional Electro-Hydraulic Load Sensing Type			This is an energy-saving type control which regulates the pump flow and load pressure to be at absolute minimum necessary level to operate the actuator. Pump flow rate and cut-off pressure are controlled proportional to the input current to the control device on the pump and the input current is regulated by the specific amplifier.	37
"04E" Proportional Electro-Hydraulic Pressure & Flow Control Type			This type of control has the pressure sensor and tilt angle sensor in the pump. The pump is used with the external amplifier. Flow and pressure can be controlled in proportion to input voltage by only one control valve. The features has been greatly improved by electrical feedback of swash plate tilt angle correspond to flow rate and load pressure to control valve. <ul style="list-style-type: none"><li>• Linearity of input characteristics is excellent and easy to set.</li><li>• Hysteresis is lower, repeatability and reproducibility are fine.</li></ul>	47
"05" Two-Pressure Two-Flow Control Type by System Pres.			This type of control is suitable for an application like "Presses" where the changeover from rapid advance to feed is required just when the pressing (pressurizing) starts.	—*
"06" Two-Pressure Two-Flow Control Type by Solenoid Valve			This pump control is suitable for machining found on machine tool, where machining starts after the changeover from rapid advance, to feed has been made.	—*

### Control Type

#### Control Type

##### Single Pumps

Control Type	Graphic Symbols	Performance Characteristics	Explanation	Page
"07" Pilot Pressure Control Type Pressure Compensator			The pump is used in combination with the pilot relief valve or multistage pressure control valve. By controlling the pilot pressure, the full cut-off pressure can be remote-controlled according to your requirements.	58
"09" Constant Power Control Type			<ul style="list-style-type: none"> <li>• Pump input power can be controlled in accordance with the motor output.</li> <li>• When the discharge pressure rise, the output flow decreases corresponding to the preset input power.</li> <li>• The pump can act for function of 2 pumps, low-pressure large-flow and high-pressure small-flow. Therefore, the motor capacity can be reduced.</li> </ul>	—*

\* Control type "05", "06" and "09" are not shown in this catalogue. Contact us for the details.

#### Availability of Control Type

##### Double Pump & Variable/Fixed Double Pump

Control Type	Graphic Symbols	Explanation	Page
"01/01" Pressure Compensator Type		These double pump consist of two "A" series single pumps combined in tandem and driven by a common shaft. Fluid delivered from two separate ports can be either supplied to separate or common circuit according to the usage.	67
"01" Pressure Compensator + Fixed Vane Pump		These double pump consist of "A" series pumps and PV2R series vane pumps combined in tandem and driven by a common shaft. Fluid delivered from two separate ports can be either supplied to separate or common circuit according to the usage.	80

★1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.

★2. Care should be taken in cases of used at a higher pressure than the rated pressure, because operating terms may be restricted. For example, if used as per maximum illustrated operating conditions, intermittent time at maximum flow is restricted to under 1/5 of one cycle time and under 6 seconds simultaneously. Conditions may vary according to the actual working pressure and delivery (inclination angle of the swash plate). Consult factory or Yuken sales representative for further information.

\*1. Applicable only for "A70/90/145"

★ 1. Available to supply pump with anti-clockwise rotation. Consult Yuken for details.

★ 2. The axial port is not available to the N.American Design Standard of A37 and A56.

★ 3. Design Standards: None ..... Japanese Standard "JIS"  
80 ..... European Design Standard  
90 ..... N. American Design Standard

★ 4. When A10 pump is used as the foot Mtg., order the Mtg. Bracket kit shown below separately. Refer to page 17 for dimensions of the Mtg. bracket.

Note: The mounting bracket kit consists of a mounting bracket, 2 hex. bolts and 2 plain washer.

Mtg. Bracket Kit Numbers	Approx. Mass kg (lbs.)
LP-1A-10	2.2 (4.9)

#### ■ Pipe Flange Kits

Pipe flange kits are available. When ordering, specify the kit number from the table below.

★ In case of using socket welding flanges, there is a case where the operating pressure should be set lower than the normal because of strength of the flanges. Therefore, please pay cautious attention to the operating pressure when the socket welding flanges are used.

• Details of the pipe flange kits are given in the Catalogue No. Pub. EC-3001

Response Characteristics Change in Accordance with Circuits and Operating Conditions.

#### Test Circuit and Conditions

##### ● Circuit

##### ● Conditions

Drive Speed : 1500 r/min  
 Hydraulic Fluid : ISO VG32 oil  
 Oil Temperature : A10-A56: 50 °C (122 °F) [Viscosity 20 mm<sup>2</sup>/s (100 SSU)]  
 A70-A145: 40 °C (104 °F) [Viscosity 32 mm<sup>2</sup>/s (150 SSU)]

##### High Pressure Rubber Hose

Model	Ruber Hose Size
A10	1/2" × 800 mm (2.6 ft.)
A16 A22	3/4" × 700 mm (2.3 ft.)
A37 A56	3/4" × 2000 mm (6.6 ft.)
A70	3/4" × 3500 mm (11.5 ft.)
A90 A145	3/4" × 3000 mm (9.8 ft.) + 1-1/4" × 2000 mm (6.6 ft.)

#### Result of Measurement

★ Applicable only for "A90/A145"

Model	Full Cut-off Pressure P <sub>1</sub> MPa (PSI)	Response Time ms		Overshoot Pressure P <sub>s</sub> MPa (PSI)
		t <sub>1</sub>	t <sub>2</sub>	
A10	21 (3050)	100	75	2.6 (380)
A16	16 (2320)	38*	59*	3.6 (520)
A22	16 (2320)	30*	72*	5.9 (860)
A37	16 (2320)	40*	78*	7.8 (1130)
A56	16 (2320)	38*	88*	7.6 (1100)
A70	25 (3630)	80	100	7.8 (1130)
A90	25 (3630)	90	110	7.9 (1150)
A145	25 (3630)	100	150	8.8 (1280)

\* Response time except A10, A70, A90 and A145 is measured Yoke travel.

**Typical Pump Characteristics**

Typical Performance Characteristics of Type "A10" at Viscosity 20 mm<sup>2</sup>/s (100 SSU) [ISO VG32 Oils, 50°C (122°F)]

**Performance Characteristic Curve**

**Input Power**

**Full Cut-off Power**

**Drain**

**Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]**

Typical Performance Characteristics of Type "A16" at Viscosity 20 mm<sup>2</sup>/s (100 SSU) [ISO VG32 Oils, 50°C (122°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 10 MPa (1450 PSI), a flow 20 L/min (5.3 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 3.7 kW (5 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover

### Typical Pump Characteristics

Typical Performance Characteristics of Type "A22" at Viscosity 20 mm<sup>2</sup>/s (100 SSU) [ISO VG32 Oils, 50°C (122°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 10 MPa (1450 PSI), a flow 30 L/min (7.9 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 5.4 kW (7.2 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

Typical Performance Characteristics of Type "A37" at Viscosity 20 mm<sup>2</sup>/s (100 SSU) [ISO VG32 Oils, 50°C (122°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 16 MPa (2320 PSI), a flow 45 L/min (11.9 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 12.6 kW (16.9 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

### Typical Pump Characteristics

Typical Performance Characteristics of Type "A56" at Viscosity 20 mm<sup>2</sup>/s (100 SSU) [ISO VG32 Oils, 50°C (122°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 16 MPa (2320 PSI), a flow 70 L/min (18.5 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 20.8 kW (27.9 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

Typical Performance Characteristics of Type "A70" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### Performance Characteristics Curve

#### Input Power

Example: At a pressure of under 20 MPa (2900 PSI), a flow 70 L/min (18.5 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 26 kW (35 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

### Typical Pump Characteristics

Typical Performance Characteristics of Type "A90" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### Performance Characteristics Curve

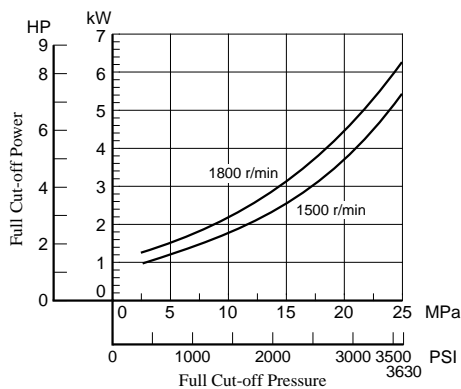

#### Input Power

Example: At a pressure of under 18 MPa (2610 PSI), a flow 110 L/min (29.1 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 34 kW (46 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

Typical Performance Characteristics of Type "A145" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### Performance Characteristics Curve

#### Input Power

Example: At a pressure of under 20 MPa (2900 PSI), a flow 180 L/min (47.6 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 64 kW (86 HP) as shown the dotted line in the graph.

#### Full Cut-off Power

#### Drain

#### Noise Level [One metre (3.3 ft.) horizontally away from pump head cover]

### Installation Drawing

- ★1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- ★2. When operating the pump exceeding the rated pressure, operating conditions are restricted. Refer to page 6 for the details.

### Solenoid Ratings

Electric Source	Coil Type	Frequency (Hz)	Voltage (V)		Current & Power at Rated Voltage		
			Source Rating	Serviceable Range	Inrush* (A)	Holding (A)	Power (W)
AC	A100	50	100	80 - 110	2.42	0.51	—
			100	90 - 120	2.14	0.37	
			110		2.35	0.44	
	A120	50	120	96 - 132	2.02	0.42	
			108 - 144	1.78	0.31		
	A200	50	200	160 - 220	1.21	0.25	
			200	180 - 240	1.07	0.19	
			220		1.18	0.22	
	A240	50	240	192 - 264	1.01	0.21	
			216 - 288	0.89	0.15		
DC (K Series)	D12	—	12	10.8 - 13.2	—	2.45	29
			24	21.6 - 26.4		1.23	
			48	43.2 - 52.8		0.61	
AC→DC Rectified	R100	50/60	100	90 - 110	—	0.33	29
			200	180 - 220		0.16

★1. In case of using socket welding flanges, there is a case where the operating pressure should be set lower than the normal because of strength of the flanges. Therefore, please pay cautious attention to the operating pressure when the socket welding flanges are used.

★2. Discharge port for pump model "A16" and "A22" is available only the threaded connections.

- Detail of the pipe flange kits are given in the Catalogue No. Pub. EC-3001.

#### ■ Instructions

##### ● Bleeding Air

In order to get steadily controlled pressure and flow, bleed air by loosening the air vent screw and fill solenoid armature with operating oil.

##### ● Manual Adjustment Screws

Manual adjustment screws may be used for initial running adjustment or in case of electrical failures in order to adjust pressure and flow temporarily. In case of normal use, put the manual adjustment screws back in their preset positions.

##### ● Position of Cable Departure

Position of cable departure can be changed. For details, refer to EDG-01 valve Catalogue No. Pub. EC-1302.

##### ● Connection of Surge Cut-off Valve to "A" Series Pump (For A16 to A56 Type)

If using surge cut-off valve (SF1105-A-10), connect between pilot port "PP" of this pump and port "PP" of surge cut-off valve as pilot piping (refer to drawing below).

Inside diameter of pipe should be more than 8 mm(.32 in.).

Consult Yuken of detail of surge cut-off valve.

- ★ 1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- ★ 2. When operating the pump exceeding the rated pressure, operating conditions are restricted. Refer to page 6 for the details.
- ★ 3. For detail specifications of power amplifiers, refer to Catalogue No. Pub. EC-1305.
- ★ 4. The figure mentioned in the above table are those obtained using Yuken's amplifier.
- ★ 5. Step response depends on circuit and operating conditions. Data shown in the table above is an example based on the condition right.

Model	Pres. Step Response		Loading Volume
	t <sub>1</sub>	t <sub>2</sub>	
A16, A22	1.5 → 16 MPa (220 → 2320 PSI)	16 → 1.5 MPa (2320 → 220 PSI)	High Pressure Hose 3/8" × 2 m (6.6 ft)

Ambient Temperature		°C (°F)	0 - 50 (32 - 122) (With Circulated Air)						
Approx. Mass kg (lbs.)	Flange Mtg.		20.5 (45.2)	20.5 (45.2)	32.0 (70.6)	39.0 (86.0)	64.0 (141)	76.5 (169)	96.4 (213)
	Foot Mtg.		22.7 (50.1)	22.7 (50.1)	36.3 (80.0)	43.3 (95.5)	76.0 (168)	97.0 (214)	121.4 (268)

- ★1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- ★2. When operating the pump exceeding the rated pressure, operating conditions are restricted.  
Refer to page 6 for the details.
- ★3. Maximum flow differs to shaft speed.  
The value listed above indicates shaft speed of 1800 r/min.  
For other shaft speed calculate by the ratio of shaft speed.
- ★4. To secure the required minimum pressure, special sequence valves are available, to be directly installed at the discharge port of the pump. Consult Yuken for details.

## Pipe Flange Kits

For Pipe flange, refer to form of pressure compensator type on page 7.

## Instructions

### Input Signal

The pump is on unload condition when the pump is operated without input signal voltage.

### Electric Source

Always turn off electric source whenever the connector for swash plate tilt angle sensor is removed.

### Compensation of Pump Maximum Regulated Flow at Frequency

If the same maximum flow is required at 50 Hz or 60 Hz, connect short plug in the amplifier to 60 Hz at the place where supplied frequency is 60 Hz. At this condition, maximum flow comes to the same value at 50 Hz.

If short plug is used at 60 Hz without making the change, maximum flow increased in proportion to frequency.

### Painting on Amp. Box and Solenoid

To maintain suitable radiation effect, the amp. Box and the solenoid of the control valve should not be painted.

### Typical Pump Characteristics

#### Output Flow vs. Input Signal

##### ● A16

##### ● A56

##### ● A22

##### ● A70

##### ● A37

##### ● A90

Note: Pump characteristics at 1800 r/min is the same as those at 1500 r/min where frequency is compensated. (Refer to page 48.)

##### ● A145

#### Full Cut-off Pres. vs. Input Signal

Refer to page 10 to 16 for performance characteristics of pressure compensator type excluding characteristics appeared on this catalogue.

A37145- <sup>*3</sup> R01*01**-60*	Outboard Pump	36.9 (2.25)	10 (.610)	16 (2320)	21 (3050)	1800	600	121.5 (268)	146.5 (323)
	Inboard Pump	145 (8.85)	83 (5.06)	25 (3630)	28 (4060)				
A56145- <sup>*3</sup> R01*01**-60*	Outboard Pump	56.2 (3.43)	12 (.732)	16 (2320)	21 (3050)	1800	600	128.5 (283)	153.5 (338)
	Inboard Pump	145 (8.85)	83 (5.06)	25 (3630)	28 (4060)				

- ★ 1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- ★ 2. When operating the pump exceeding the rated pressure, operating conditions are restricted. Refer to the page 70 for the details.
- ★ 3. The maximum input power of these pumps must be restricted, because of the shaft strength. Refer to the page 70 for the details.

## Model Number Designation

★ In case of using socket welding flanges, there is a case where the operating pressure should be set lower than the normal because of strength of the flanges. Therefore, please pay cautious attention to the operating pressure when the socket welding flanges are used.

- Details of the pipe flange kits are given in the Catalogue No. Pub. EC-3001.

### ■ Instructions

#### ● When using at a higher pressure than the rated pressure

Care should be taken in cases of used at a higher pressure than the rated pressure, because operating terms may be restricted. For example, if used as per maximum illustrated operating conditions, intermittent time at maximum flow is restricted to under 1/5 of one cycle time and under 6 seconds simultaneously. Conditions may vary according to the actual working pressure and delivery (inclination angle of the swash plate). Consult factory or Yuken sales representative for further information.

#### ● Allowable Input Power

With the pumps listed in the table below, there is a limit to the sum of the input power of the inboard and outboard pumps because of shaft strength. If both pumps are used for boosting at once, referring to the calculation formulas below, check that the displacements and discharge pressures of both pumps are within the allowable ranges.

★1. Applicable only for the inboard pump of "A\*70", "A\*90" and "A\*145".

$$Q1 \times P1 + Q2 \times P2 \leq L_M$$

Q1 : Displacement (cm<sup>3</sup>/rev)  
P1 : Discharge Pressure (MPa) } Outboard Pump  
Q2 : Displacement (cm<sup>3</sup>/rev)  
P2 : Discharge Pressure (PSI) } Inboard Pump  
L<sub>M</sub>: See the table below

$$Q1 \times P1 + Q2 \times P2 \leq L_P$$

Q1 : Displacement (cu.in./rev)  
P1 : Discharge Pressure (PSI) } Outboard Pump  
Q2 : Displacement (cu.in./rev)  
P2 : Discharge Pressure (PSI) } Inboard Pump  
L<sub>P</sub>: See the table below

DIMENSIONS IN  
MILLIMETRES (INCHES)

- ★ 1. Install the pump so that the "Filling Port" is at the top.
- ★ 2. Use either port of two drain ports of inboard pump at your option. Keep the remaining port plugged. Note that on the European design standard (6080 Design), only the left side, as viewed from the shaft end, of the drain port of inboard pump is machined.
- ★ 3. Case drain port is available for use when draining hydraulic fluid from pump casing.

Notes :1 When ordering seals, please specify the seal kit number from the table above.

2 Complete seal kit consists of a seal kit for inboard pump, a seal kit for outboard pump and a piece of O-ring for item 80.

3 Seal kit and bearings for inboard pump and outboard pump are same as those for "A" series single pump. For details, please refer to the table below and see the chart on the page relevant to pump model number concerned.

- ★ 1. Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- ★ 2. Care should be taken in cases of use at a higher pressure than the rated pressure, because operating terms may be restricted. For example, if used as per maximum illustrated operating conditions, intermittent time at maximum flow is restricted to under 1/5 of one cycle time and under 6 seconds simultaneously. Conditions may vary according to the actual working pressure and delivery (inclination angle of the swash plate). Consult factory or Yuken sales representative for further information.

\*1. Applicable only for A70R1/R2, A90R1/R2, A145R1/R2.

- ★ 3. The maximum input power of except "A56R1" pump must be restricted, because of the shaft strength. Refer to the following page.

### ■ Allowable Input Power

With the pumps listed in the table below, there is a limit to the sum of the input power of the inboard and outboard pumps because of shaft strength.

If both pumps are used for boosting at once, referring to the calculation formulas below, check that the displacements and discharge pressures of both pumps are within the allowable ranges.

$$Q1 \times P1 + Q2 \times P2 \leq L_M$$

Q1 : Displacement (cm<sup>3</sup>/rev)  
P1 : Discharge Pressure (MPa) } Outboard Pump  
Q2 : Displacement (cm<sup>3</sup>/rev)  
P2 : Discharge Pressure (MPa) } Inboard Pump  
L<sub>M</sub> : See the table below

$$Q1 \times P1 + Q2 \times P2 \leq L_P$$

Q1 : Displacement (cu.in/rev)  
P1 : Discharge Pressure (PSI) } Outboard Pump  
Q2 : Displacement (cu.in/rev)  
P2 : Discharge Pressure (PSI) } Inboard Pump  
L<sub>P</sub> : See the table below

Model Numbers	L <sub>M</sub>	L <sub>P</sub>
A16R1/A22R1	523	4627
A37R1	900	7963
A70R1/A70R2	2408	21305
A90R1/A90R2	4348	38470
A145R1/A145R2	4739	41930

### ● Geometric Displacement and Max. Pressure of Outboard Pump

A*R2-*R01*-65	64.7 (3.95)	14 (2030)	

★ 1. When pump is operated pressure more than 16 MPa (2320 PSI), shaft speed should be more than 1450 r/min.

### ■ Instructions

#### ● Suction Pressure of Outboard Pump

Permissible suction pressure at inlet port of the outboard pump (PV2R) is the range between -20 kPa and +30 kPa (5.9 in. Hg vacuum and +4.3 PSIG).

#### ● Suction Piping of Outboard Pump

When the operating speed is less than 1200 r/min, the suction port of the outboard pump (PV2R) should be facing upwards to facilitate oil suction when starting.

#### ● When Starting the pump at low speed

maximum viscosity is restricted. Refer to the table below.

Model	Start-up Speed r/min	Max. Viscosity mm <sup>2</sup> /s (SSU)
A*R1	750	100 (465)
	950	200 (930)
A*R2	600	100 (465)
	950	200 (930)

### ■ Performance Characteristics

Performance characteristics of inboard pump refer to relevant page for performance characteristics of "A" series single pumps excluding noise level characteristics.

Performance characteristics of outboard pump refer to "PV2R" series vane pump catalogue (catalogue No. Pub. EC-0118).

Model	Performance Characteristics	
	Inboard Pump	Outboard Pump
A16R1	Same as Single Pump "A16", Refer to Page 10	Same as Vane Type Single Pump "PV2R1". Refer to the Catalogue No. Pub.EC-0118.
A22R1	Same as Single Pump "A22", Refer to Page 11	
A37R1	Same as Single Pump "A37", Refer to Page 12	
A56R1	Same as Single Pump "A56", Refer to Page 13	
A70R1	Same as Single Pump "A70", Refer to Page 14	
A90R1	Same as Single Pump "A90", Refer to Page 15	
A145R1	Same as Single Pump "A145", Refer to Page 16	
A70R2	Same as Single Pump "A70", Refer to Page 14	Same as Vane Type Single Pump "PV2R2". Refer to the Catalogue No. Pub.EC-0118.
A90R2	Same as Single Pump "A90", Refer to Page 15	
A145R2	Same as Single Pump "A145", Refer to Page 16	

### ■ Pipe Flange Kits

Pipe flange kits are available. When ordering, specify the kit number from the table below.

#### ● For Inboard Pump ("A" Pump)

\* In case of using socket welding flanges, there is a case where the operating pressure should be set lower than the normal because of strength of the flanges. Therefore, please pay cautious attention to the operating pressure when the socket welding flanges are used.

● Details of the pipe flange kits are given in the Catalogue No. Pub. EC-3001.

Notes: 1) When ordering seals, please specify the seal kit number from the table above.

2) Complete seal kit consists of a seal kit for inboard pump, a seal kit for outboard pump and a piece of O-ring for item 80.

3) Seal kit and bearings for inboard pump are same as those for "A" series single pump. For details, please refer to the table below and see the chart on the page relevant to pump model number concerned.

4) For details of seals and bearing for outboard pump, please see the chart on the following page.

Model	Inboard Pump
A16R1	Same as single pump "A16" (Page 25)
A22R1	Same as single pump "A22" (Page 25)
A37R1	Same as single pump "A37" (Page 25)
A56R1	Same as single pump "A56" (Page 25)
A70R1/A70R2	Same as single pump "A70" (Page 26)
A90R1/A90R2	Same as single pump "A90" (Page 26)
A145R1/A145R2	Same as single pump "A145" (Page 27)

### Spare Parts List

#### ● Detail of Outboard Pump

A\*R1

A\*R2

#### ● Sales & Bearing

Item	Name of Parts	Part Numbers		Qty.
		A*R1	A*R2	
5	Bearing	6004	6205	1
6*	Oil Seal	SB 20428	ISD 30428	1
7*	O-Ring	SO-NB-G80	SO-NB-G105	1
8*	O-Ring	SO-NB-G60	SO-NA-G85	1
9*	O-Ring	SO-NB-G30	SO-NA-P46	1

Note: Item Nos. ⑧ and ⑨ (O-rings) are included in the cartridge kit.

★ When ordering seals as described in the table above, please specify the seal kit number referring to chart on the previous page.

#### ⚠ CAUTION

When making replacement of seals, bearings or cartridge kits, please do it carefully after reading through the relevant instructions in the Operator's Manual.

**"AH" SERIES PISTON PUMPS**  
**Variable Displacement-Single Pumps**  
**Pressure Compensator Type**  
**AH 16 / AH 37 / AH 56**

**PISTON PUMPS**

**A**

**Up to 31 MPa (4500 PSI), 56.2 cm<sup>3</sup>/rev (3.43 CU.IN./rev)**

**Features**

**● Port Plate**

A special shape maintains a high volumetric efficiency under high pressure and provides greater durability.

**● Cradle Support Bearing**

Compared with conventional bearings, this bearing has strengthened rigidity of the swash plate. Noise level has much lowered because it is supported by a housing.

"AH16" type performance characteristics

"AH16" type noise level characteristics

**● High Pressure**

Max. Operating Pres. 31 MPa (4500 PSI)

**● High speed**

Max. 3600 r/min (AH 16)

### Instructions

#### 1. Hydraulic Fluids

Use petroleum base oils such as anti-wear type hydraulic oils or R & O (Rust and Oxidation inhibitor) type hydraulic oils equivalent to ISO VG-32 or 46.

The recommended viscosity range is from 20 to 400 mm<sup>2</sup>/s (98 to 1800 SSU) and temperature range is from 0 to 60°C (32 to 140°F), both of which have to be satisfied for the use of the above hydraulic oils.

#### 2. Control of Contamination

Due caution must be paid to maintaining control over contamination of the operating oil which can otherwise lead to breakdowns and shorten the life of the unit. Please maintain the degree of contamination within NAS Grade 10.

The suction port must be equipped with at least a 100 μm (150 mesh) reservoir type filter and the return line must have a line filter of under 10 μm.

#### 3. Mounting

When installing the pump the filling port should be positioned upwards.

#### 4. Alignment of Shaft

Employ a flexible coupling whenever possible, and avoid any stress from bending or thrust.

Maximum permissible misalignment is less than 0.1 mm (.0039 inches) TIR and maximum permissible misangular is less than 0.2°.

#### 5. Suction Pressure

Permissible suction pressure at suction port of the pump is between -16.7 and +50 kPa (5 in.Hg Vacuum and 7 PSIG). In case of the speed is over 1800 r/min, adjust the pressure 0 to +50 kPa (0 to 7 PSIG).

For piping to the suction port, use the pipes of the same diameter as that of the specified pipe flange to be used.

Make sure that the height of the pump suction port is within one metre (3.3ft.) from the oil level in the reservoir.

#### 6. Hints on Piping

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise.

Whenever there is fear of excessive load, please use rubber hoses.

#### 7. Suction Piping

In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.

#### 8. Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal pressure of less than 0.1 MPa (15 PSI) and surge pressure of less than 0.5 MPa (70 PSI).

Length of piping should be less than 1 m (3.3 ft.), and the pipe end should be submerged in oil.

[Recommended Drain Piping Size]

Model	Fitting Size	Inside Dia. of pipe
AH16 AH37	1/2 [Inside Dia. 12 mm (.47 in.) or more]	12 mm (.47 in.)
AH56	3/4 [Inside Dia. 16 mm (.63 in.) or more]	19 mm (.75 in.)

#### 9. Bleeding Air

It may be necessary to bleed air from pump case and outlet line to remove causes of vibration. An air bleed valve (Model No. ST1004-\* -10\*, Catalogue No.: Pub. EC-3001) is recommended for this purpose.

#### 10. Starting

Before first starting, fill pump case with clean operating oil via the fill port.

In order to avoid air blockage when first starting, adjust the control valves so that the discharged oil from the pump is returned direct to the tank or the actuator moves in a free load.

[Volume of Pre-fill Oil Required]

Model	Volume cm <sup>3</sup> (in. <sup>3</sup> )
AH16	600 (36.6)
AH37	1100 (67.1)
AH56	1500 (91.5)

## 11. Setting Discharge Pressure and Delivery

At the time of shipment, the unit has been preset to maximum delivery and minimum discharge pressure.

Adjust the preset delivery and pressure to meet your system requirements.

### ● Adjustment of Discharge Pressure

Turning the adjustment screw clockwise, increases pressure.

[ Volume adjusted by each full turn of the pressure adjustment screw ]

Model Numbers	Adjustment Volume MPa (PSI)
AH16/AH37/AH56	5.4 (780)

### ● Adjustment of Delivery

Turning the flow adjustment screw clockwise, decreases delivery.

[ The minimum adjustable flow and adjustable volume of each full turn of the delivery adjustment screw ]

Model Numbers	Adjustable volume with each full turn of the adjustment screw cm <sup>3</sup> /rev (cu.in./rev)	Minimum adjustable flow cm <sup>3</sup> /rev (cu.in./rev)
AH16	1.4 (.085)	8 (.488)
AH37	3.0 (.183)	14 (.854)
AH56	3.5 (.214)	35 (2.14)

● Detail of the pipe flange kits are given in the Catalogue No. Pub. EC-3001.

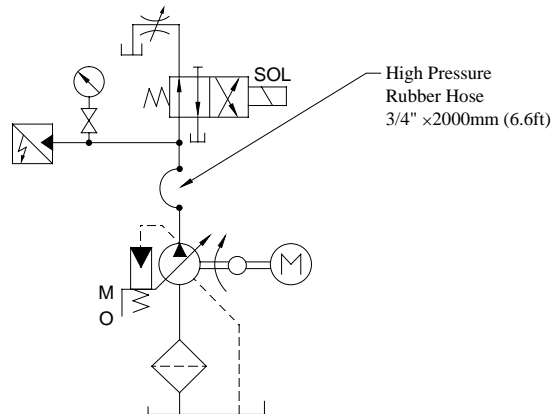

**Response Characteristics**

■ Response Characteristics

Response Characteristics Change in Accordance with Circuits and Operating Conditions.

● Test Circuit and Conditions

● Circuit

● Conditions

Drive Speed: 1500 r/min  
 Hydraulic Fluid: ISO VG32 Oil  
 Oil Temperature: 40°C (104°F) [Viscosity 32 mm<sup>2</sup>/s (150 SSU)]

● Result of Measurement

Model	Response Time ms		Ps Overshoot Pres. MPa (PSI)
	t <sub>1</sub>	t <sub>2</sub>	
AH16	50	95	2.5 (360)
AH37	60	150	5.1 (740)
AH56	60	115	8.3 (1200)

Typical Performance Characteristics of Type "AH16" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### ■ Performance Characteristic Curve

#### ■ Input Power

Example: At a pressure of under 30 MPa (4350 PSI), a flow 15 L/min (4.0 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 9 kW (12 HP) as shown the dotted line in the graph.

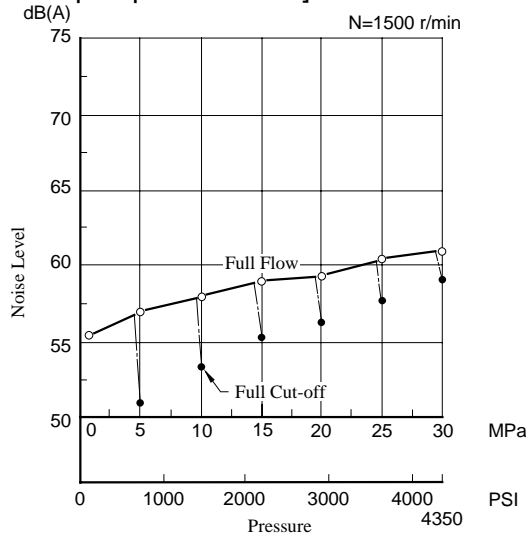

Note) The dotted line in the graph indicates less than minimum adjustable flow.

Typical Performance Characteristics of Type "AH16" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### ■ Noise Level

[One metre (3.3 ft.) horizontally away from pump head cover]

#### ■ Full Cut-off Power

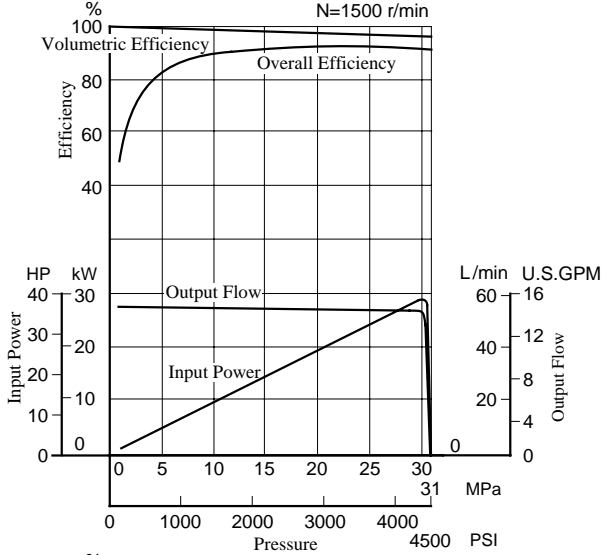

#### ■ Drain

Typical Performance Characteristics of Type "AH37" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 30 MPa (4350 PSI), a flow 35 L/min (9.2 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 19 kW (25.5 HP) as shown the dotted line in the graph.

Note) The dotted line in the graph indicates less than minimum adjustable flow.

### Typical Pump Characteristics

Typical Performance Characteristics of Type "AH37" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### ■ Noise Level

[One metre (3.3 ft.) horizontally away from pump head cover]

#### ■ Full Cut-off Power

#### ■ Drain

Typical Performance Characteristics of Type "AH56" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### Performance Characteristic Curve

#### Input Power

Example: At a pressure of under 30 MPa (4350 PSI), a flow 65 L/min ( 17.2 U.S.GPM), and rotation 1500 r/min, the axial input becomes about 36 kW (48 HP) as shown the dotted line in the graph.

Note) The dotted line in the graph indicates less than minimum adjustable flow.

### Typical Pump Characteristics

Typical Performance Characteristics of Type "AH56" at Viscosity 32 mm<sup>2</sup>/s (150 SSU) [ISO VG32 Oils, 40°C (104°F)]

#### ■ Noise Level

[One metre (3.3 ft.) horizontally away from pump head cover]

#### ■ Full Cut-off Power

#### ■ Drain
